Project Title: Audrey Hepburn Website

I want to build a website that has multiple pages, rather than continuous scroll. I would like buttons across top to different pages, and also section buttons that direct to different sections of the page. There is a lot of information, so I think it would be good to break up the information to different sections

- **Introduction** – introduce who Audrey Hepburn is, her life, and her legacy
- **Early life** – family, childhood, WWII experiences
- **Entertainment Career** – Ballet, Movies, Retirement, and other projects (including filmography and awards and honors)
- **Humanitarian work** – UNICEF, awards and honors
- **Personal life and final years** – relationships, children, illness and death
- **Legacy** – public image, style icon
- **Sources** – wikipedia page and other photos
